Kodjo Jean-Gaël AMEGANVI

Freelance Fullstack & AI-Assisted Developer — Python · TypeScript · Java

jg.ameganvi@gmail.com | +228 93 72 11 24 | Lomé, Togo
github.com/Alwil17 | linkedin.com/in/jg-ameganvi

Available for freelance remote missions — based in Lomé (GMT+0): full overlap with European hours, morning overlap with the US East Coast. English (B2) and French (native).

PROFILE

Fullstack developer with 5 years of experience shipping production systems in telecom, healthcare and HR tech, now working freelance. I use AI assistants every day (Claude Code, GitHub Copilot, Cursor) to design, build and ship faster without giving up on architecture, tests and code review. I am the creator of Mr Wallet, a personal finance app used by about 200 people, designed and built with AI. Backend-focused (Python/FastAPI, NestJS, Spring Boot) with solid frontend delivery (Next.js, React, Angular) and hands-on work on LLM integration (structured extraction, prompt engineering, API orchestration). Maintainer of AutoMaintainer, a GitHub App published on the GitHub Marketplace.

TECHNICAL SKILLS

AI & LLM
AI-assisted development (Claude Code, GitHub Copilot, Cursor), LLM integration (structured extraction, prompt engineering, API orchestration), conversational AI assistant (in progress)

Backend
Python (FastAPI, Django), TypeScript (NestJS, Node.js), Java (Spring Boot), C# (.NET 6/7, ASP.NET Core), PHP (Laravel)

Frontend
Next.js, React, Angular, TypeScript, JavaScript, Tailwind CSS

Mobile / Web
Expo / React Native, PWA

Databases
PostgreSQL, SQL Server, MySQL, MongoDB

DevOps
Docker, Git, GitHub Actions (CI/CD, self-hosted runners), Grafana, ELK

Security & testing
Keycloak (SSO, RBAC), JWT, OAuth2, unit and integration testing

Data
Apache Spark, SQL data pipelines

Methods
Agile / Scrum, Jira, code review, technical documentation, requirements gathering, support and maintenance

FEATURED PROJECTS

Mr Wallet — *Personal finance management app — about 200 users, open source PWA*

Creator and lead developer. Web app (Next.js PWA + NestJS API, TypeScript monorepo) that lets individuals centralize their accounts, import statements (CSV/Excel), manage budgets and debts, project their future finances and export their data, with a timestamped audit log of every action. Designed and built with AI assistants. Bilingual (French/English). A native iOS/Android app (Expo / React Native, offline-first) and a conversational AI financial assistant are in progress.

AutoMaintainer — *GitHub App (Probot), published on the GitHub Marketplace*

Automatically opens issues from TODO comments, and comments on and labels pull requests to keep repository maintenance moving.

SecurePasswordCrypt — *C# AES-GCM encryption library*

A reusable C# library for password hashing and AES-GCM encryption, for scenarios where storing or using plaintext secrets (e.g. connection strings) is a risk.

WORK EXPERIENCE

Full-Stack Developer & Data Engineer

Oct. 2025 – Present

Digi Job — Lomé, Togo

- Designed and built an internal platform for KPI collection, resource management and timesheets (Next.js, FastAPI, PostgreSQL), working daily with Claude Code as an AI pair-programmer
- Integrated Keycloak SSO with role-based access control (RBAC), replacing manual account handling and cutting new-user onboarding to 3 minutes
- Designed and shipped REST APIs backing 7 business modules, with code review, technical documentation, and unit and integration tests on critical paths
- Set up CI/CD pipelines with GitHub Actions and self-hosted runners, automating multi-repository deployment to internal servers and removing manual releases
- Handle deployment, production monitoring, and corrective and adaptive maintenance

Application Developer

Apr. 2022 – Oct. 2025

Moov-Africa Togo — Lomé, Togo

- Automated network reporting from CDR data (Python, Apache Spark, SQL Server), cutting report production from 6 hours to 1 hour
- Built real-time network monitoring dashboards (Grafana, ELK) used daily by the mediation and other teams to detect incidents before customer impact
- Optimized data pipelines processing 100+ million CDR records per day, improving job runtime by 80%
- Trained 3 new team members on internal tooling (Spark, .NET) and wrote the accompanying documentation
- Used AI assistants day to day for code, debugging and documentation

Technical Consultant

Apr. 2023 – Oct. 2025

Saint-Joseph International Polyclinic — Lomé, Togo · *part-time consulting engagement*

- Designed, developed and delivered a custom medical management platform (Java / Spring Boot, Angular 22, SQL), from requirements analysis to production, covering patient records, appointments and user management, used by 60 staff across 5 departments; developed with GitHub Copilot
- Defined a modular, scalable software architecture to support growing patient volume and future modules
- Analyzed and specified requirements directly with medical teams, translating clinical workflows into a delivery backlog (Jira, Agile)
- Handled deployment, production monitoring and technical support for medical and administrative users; advised leadership on technology strategy, tooling and technical hiring

Web Developer

Mar. 2021 – Mar. 2022

MADE IN TOGO — Lomé, Togo · *part-time*

- Developed and maintained the Gyfyfy web platform (Laravel, React, Inertia.js, MySQL), with continuous UI improvements
- Delivered a showcase website for Villa Lahimmat and an e-commerce store for school supplies (PrestaShop)
- Implemented business features including order flows, product catalogs and custom forms

EDUCATION

Master's Degree in Software Architecture — ESGIS, Lomé, Togo
2023 – 2025

Bachelor's Degree in Application Development — UCAO-UUT, Lomé, Togo
2018 – 2021
